Simple evaluation of Heart function

How is your artery?

Let's check your arteriosclerosis level from vascular "stiffness" and "occlusion".

How is your arterial stiffness (baPWV) ?

R: 1943 L: 1941
(Pre.Value R: L:)

Compared to healthy men age 79,
it is slightly harder.

* baPWV mainly measures the large arterial stiffness and it does not indicate the cerebrovascular or cardiovascular stiffness.

How is your arterial occlusion (ABI) ?

R-Leg: 1.14 L-Leg: 1.17
(Pre.Value R-Leg: L-Leg:)

This examination result is within
normal range.

* ABI is the index to indicate vessel occlusion in the lower body mainly. The picture is just an image and it does not indicate the actual condition.
